RG58A/U Coax Delay

DB64 — RG58A/U coax delay

DB64 Coax Delay

· Switch controlled time delays

· 0 to 63.5 ns delay range

· 0.5 ns resolution

· Low reflections and feed-through

· DB64 ... $695 (U.S. list)

The DB64 Coax Delay Box provides switch-controlled delays from 0 to 63.5 ns with 0.5 ns resolution. Applications include the timing of photomultiplier coincidences, set-up of time-to-amplitude converters, adjustment of signal phase, or any application which requires high-bandwidth analog delays.

The interchangeable inputs/outputs are on BNC connectors. Internally, the delay line segments consist of accurate lengths of RG58A/U coax cable with 50 Ω characteristic impedance. DPDT switches are used to insert or remove delay segments. Careful component selection, mechanical design, and PCB layout ensure low reflections and low switch feed-through.

Two DB64s can be mounted side-by-side in a 19" rack using the RM1U rack mount accessory. A chassis lug is provided on the rear panel as a safety ground.

Specifications

Signal

Maximum voltage	250 Vrms
Maximum current	2 A
Connectors	BNC
Impedance	50 Ω
Signal reflection	<3 %
Switch feed through	<0.8 pF

Delay

Delay line cable	RG58A/U (Belden 8259)
Insertion delay	2.5 ns
Delay range	0 to 63.5 ns
Delay resolution	0.5 ns
Delay error	<100 ps + 0.5 % of delay

General

Dimensions	8.3" × 1.5" × 8.0" (WHL)
Weight	2 lbs.
Warranty	One year parts and labor on defects in materials & workmanship

SRS *Stanford Research Systems*
